Job Application for Summer Intern 2025

Dear Mr./Ms./Dr.,

About Me

I am a pre-final year student at IIIT Bhubaneswar, aspiring to be a software developer. I have strong expertise in React.js and Next.js frameworks and am currently working with Django for backend development. I excel in delivering scalable and innovative solutions in fast-paced global environments, managing databases, performing API testing, and handling virtual environments. My strategic thinking and passion for cybersecurity drive me to integrate security best practices into software design to mitigate risks and safeguard digital assets, ensuring smart and secure solutions.

Why Google?

As a beginner and lifelong learner, I strive to be surrounded by great peers in my field, and your organization seems perfect for this goal. Despite being a fresher, I integrate the latest technologies with my knowledge of Data Structures, Algorithms, Operating Systems, Digital Electronics, Web Applications, and Software Engineering to efficiently solve problems, from the ground up to optimized solutions. I capitalize on ideas, engage in creative collaborations, and adeptly adapt to changes to ensure continuous improvement and innovation in building solutions in risk management..

Why Me?

Academically, I have consistently demonstrated growth and improvement, aligning well with your company's policies. While I may not achieve excellence immediately, I am confident that, with time and continuous learning, I will reach that level of proficiency.

I am building and working on more real word projects and I too believe I can make a significant contribution to the institution as well .

I look forward to work and learn with you.

Sincerely,

Astha Sharma

P.S. I have attached my resume for your reference. resume.pdf
